### IMPORTANT INFORMATION YOU NEED TO READ.

#### WARRANTY NOTES.

Thank you for choosing Green Pest Control. This form is to explain some procedures, warranties, and to help you get the best value from your pest treatment.

Your warranty covers:

DATE:	INSIDE	OUTSIDE
COCKROACHES		
SILVERFISH		
SPIDERS		
ANTS		
FLEAS		
TERMITES		
ROOF VOID		
RATS & MICE		
OTHER		

The warranty is for the present occupant only and is **not transferable**. If the warranty has expired but you are close to the expiration date you may be eligible for retreatment at a reduced rate; just ask.

All warranties offered are set from the manufacturers recommendations based on the correct application of the product mixed at label rates.

These vary for good reason. Modern pesticides are biodegradable and break down in the environment from the action of U/V radiation, heat, & soil microbes.

Other factors that affect the life of the pesticide are dust, rain, and most importantly the texture of the surface on which it is applied. Brickwork for example is hopeless; whilst glass and other smooth surfaces are excellent.

The spray applied inside of your cupboards lasts a long time because they offer smooth surfaces and are dark. Some companies offer longer unrealistic warranties but usually fail to obligate them. Our warranty is genuine and reliable.

### AFTER SERVICE DIRECTIONS.

#### GENERAL RULES FOR ALL TREATMENTS:

- Where possible, don't clean treated surfaces after treatment.
- Rinse any kitchen items to remove over-spray before use.
- Don't touch wet surfaces. Leave windows open to allow any fumes to escape until the surfaces are dry.

#### COCKROACHES / SPIDERS / ANTS

- Respray the edges of all surfaces that you wipe down at least once a week, especially around the sinks. Do this preferably before going to bed. Any surface spray will do, eg. Home Brand, Baygon, Raid.
- Please, do not use the dishwasher for [ ] days as the heat breaks down the pesticide and this will allow the pest eggs inside the case of the machine to hatch unimpeded.
- Ensure that you clean up cockroach egg cases  to prevent reinfestation. Each case contains about 30 eggs so make sure you empty them outside.
- Allow 4 weeks for hidden eggs to hatch and new cockroaches to die as they explore across treated surfaces.
- Do not mop edges of floors for at least 4 weeks. Just mop the middle please. Vacuum as per normal.

#### SPECIAL FLEA INSTRUCTIONS:

- Do not vacuum for 2 weeks, otherwise warranty is voided!
- Arrange flea treatment of pets as soon as possible.
- People and all pets should remain outside until all floor surfaces are dry.
- Allow 2 weeks for treatment to kill all fleas.
- **NOTE:** Fleas in the pre-emergence phase are impervious to the spray and will hatch and jump before dying. They are soft and easy to squeeze dead, or else flick them back onto the carpet where they will soon die.
- Hot wash or iron any bedding suspected of having fleas, including pet blankets and their bedding.

### SPECIAL NOTES AND ADVICE:

Pesticides slowly break down and as they do they take longer to kill newly arriving insects. Initially you can expect a cockroach to die about 3 hours after entering your house and contacting the pesticide.

However a spider can take upwards of 24 hours. This is because they are stronger, bigger, and hairy. Yuck! It takes much longer for them to pick up a lethal dose. Sorry.

The only way an insect intruder will die sooner is if you spray it yourself when you see it. The odd cockroach may park on an untreated wall surface to escape. Just hit them with a brief squirt of fly spray. Otherwise be patient and it will die from your present treatment.

Most surface sprays are not repellent to insects and do not deter insects at your door. Advertising on TV that implies such is misleading.

Externally, the treatment will kill those pests currently present, but because of adverse environmental factors, new arrivals rarely contact enough residual pesticide to die.

Warranties are non-transferable because the cleaning of a home between occupants removes much of the spray. Also new occupants can bring in untreated appliances that contain cockroaches and/or cockroach eggs.

Thank you for your business. We pride ourselves in giving you genuine warranties and full support. If you have any questions, please don't hesitate to contact us.
